CSI Product Description: 250 & 251DT Thermally Broken Storefront Series

Product Name: 250 & 251DT Thermally Broken Storefront Series Word Count: 198/200

PRL's 250 and 251DT thermally broken storefront series are designed for high performance. Manufactured with thermally broken aluminum frames, these commercial grade systems prevent heat transfer for maximum energy efficiency. A thermal break in the seal helps maintain indoor temperatures, while weatherstripping minimizes exterior air infiltration for increased protection from the elements. We produce these thermally broken storefronts as complete systems. And as a single-source supplier, we also offer shop drawings, job site delivery and a variety of other services.

We generate our 250 and 251DT thermally broken storefronts in-house. Shipped pre-glazed and ready to install, they include everything you need. All systems come with 1" center glazed (250DT) or offset glazed (251DT) aluminum sections measuring 2" x 4 ½" and you can specify your finish, entry door, sidelites, glass type and hardware. We also furnish cut sized frames, brake-formed aluminum fillers, and steel stiffeners for your storefront projects.

251DT Thermally Broken Storefront Series Include:

Framing Sections: 2" x 4 ½"

Aluminum Finish: Anodized, powder coats & Kynar paints

Entry Door Stile: Narrow, medium, wide & custom

Sidelites: Assorted sizes, lengths & finishes

Glass Type: Tempered, laminated, IG & impact resistant

Hardware: Hinges, handles, locks & panic devices
